Harvey Angle Hip Cap

The Harvey Angle Hip Cap is a high-quality roofing accessory designed to cover and protect hip lines (external roof angles). It provides a weathertight seal, structural protection, and a visually clean finish, ensuring the integrity and durability of the roofing system. Manufactured from coated steel, it integrates seamlessly with Harvey roof tiles for long-lasting performance.

Specification	Value
Application	Roof hip lines (external angles)
Installation Method	Fixed to hip battens
Approx. Length	580 mm (covers one tile course)
Width	125 mm (tapered to ± 123 mm)
Height	75 mm (tapered up to ± 105 mm)
Mass	0.8 kg

Key Features & Benefits

Hip Line Protection

- Covers exposed hip joints where two roof slopes meet
- Prevents water penetration and wind uplift
- Maintains roof integrity in critical areas

Weatherproof Performance

- Designed to eliminate gaps along hip lines
- Resistant to rain, wind, and dust ingress
- Enhances overall roof waterproofing system

Durable Steel Construction

- Manufactured from corrosion-resistant coated steel
- Built for harsh environmental conditions
- Long service life with minimal maintenance

Seamless System Fit

- Engineered specifically for Harvey roofing tiles
- Ensures a secure, precise fit for consistent installation
- Works as part of a complete roofing accessory

Enhanced Aesthetic Appeal

- Provides a uniform and professional finish along roof hips
- Matches tile colour and profile
- Elevates the overall roof appearance

Easy Installation

- Fixed to hip battens with standard fasteners
- Lightweight and easy to handle
- Designed for efficient on-site installation
