

HOT ROLLED SHEETS – S355J0WP GRADE

Hot rolled sheets are cut from hot rolled coil, which is de-coiled and processed into the required length. S355J0WP hot rolled sheet is a high-strength, European-standard structural steel grade engineered with improved atmospheric corrosion resistance, universally classified across the steel industry as a weather-resistant (or weathering) steel. Equivalent to Corten A, this grade is specifically alloyed with copper, chromium, nickel, and a higher phosphorus content.

Product application

- Architectural sculptures and aesthetic building facades
- Gas flues, stack gas applications, and thin fascia components
- Freight containers and transport infrastructure exposed to the elements

Sizes available

Dimensions	KG per sheet
2500x1200x3mm	72.35
3000x1200x3mm	86.82
