

PLATE HALF ARROW HEAD

Half arrows are used to protect the leading edges of earthmoving and mining buckets, such as load-haul-dump (LHD) machines, front-end loaders, and shovels. They are welded or bolted onto the bucket lip to act as a sacrificial barrier, absorbing the brunt of abrasion and impact during digging and loading.

Additional information:

Hardness:	360 – 450 HB
Delivery condition:	Quenched and tempered
Standard length:	3,6 meters
Mass:	29mm - 65.65kg/m 40mm - 88.9kg/m
Weldability:	Good - use low hydrogen consumables
