

BULLET HINGE

The bullet hinge is a compact and robust hinge designed for use with metal doors, gates, frames and enclosures. Its barrel-style design provides a strong and practical method of connecting a moving metal panel to a fixed frame. Bullet hinges are commonly used in industrial, agricultural and residential applications and are available in a range of sizes to suit different installation requirements.

Key Features:

- Robust steel construction
- Compact barrel-style hinge design
- Available in a range of sizes for different applications
- Suitable for metal doors, gates and frames
