

SPACER BLOCK

Spacer blocks are placed between the timber post and guardrail. They are creosoted to preserve the timber. Splice bolts are used to keep the spacer block attached to the guardrail. Post bolts are then used to join the guardrail, spacer block and timber post.

Available options:

- 360mm x 115mm x 115mm spacer block is used with the 150mm x 170mm tapered timber post
- 360mm x 100mm x 50mm spacer block. Four are used to give a 200mm spacing on the 175mm x 200mm tapered timber post
