## REDUCING SOCKET

## Steam Fittings - EN10242.

Reducing sockets are used to adapt the bore size of pipes, thereby increasing the offering of diameters available. Both ends are female threaded. Reducing sockets are used to connect two different sizes of pipe, similar to a concentric reducer which is use to maintain a centreline of a pipe, but is smaller in size.

Sizes available:

| Male diameter (MM) | $\mathbf{8}$ | $\mathbf{1 0}$ | $\mathbf{1 5}$ | $\mathbf{2 0}$ | $\mathbf{2 5}$ | $\mathbf{3 2}$ | $\mathbf{4 0}$ | 50 | 65 | 80 | 100 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 6 |  |  |  |  |  |  |  |  |  | 50 |
|  |  |  | 8 | 8 | 8 | 8 |  |  |  |  |  |
