

SPANJAARD NON-SILICONE SPATTER RELEASE

This non-water-based anti-spatter spray safeguards surfaces during welding by preventing weld spatter from adhering to work surfaces and equipment within the weld zone. The spray applies easily and forms a barrier that prevents spatter from adhering, making it easy to brush away. It also prevents spatter buildup in the nozzles of CO2 gas-shrouded welding guns. After welding, cleanup is straightforward, ensuring surfaces are ready for painting or galvanizing without complications, enhancing work efficiency.

Additionally, this spray can extend the lifespan of welding equipment. It is environmentally friendly and biodegradable. Suitable for use in welding workshops, industrial settings, and during metal fabrication, this non-silicone spray is ideal for industries where silicone contamination must be avoided. It is compatible with all metal/inert gas (MIG), metal/active gas (MAG), CO2, and flux-cored arc welding operations.

Size:

400ml.
