Data Sheet

WHEEL KITS

The wheel kit sizes range from 40mm to 120mm. All products are manufactured from high quality steels & are guaranteed against faulty workmanship. Wheel products are professionally designed for simple installation and silent operation.

The anti scuff brackets were designed to omit the chances of inevitable squeaks arising from the rubbing of the wheel against the bracket. With the anti-scuff, wheels run smoothly & silently, stopping unnecessary load and wear on the gate motor and its rack & pinion.

Each kit comes a high quality PVC plastic roller with an M12 bolt, nut and washer.
